

EVERLINK®

ATM Remote Software Manager (RSM)

CHALLENGES

- Are you incurring increased 3rd-party technician costs and a decrease in branch staff productivity by having to perform manual updates?
- Can you afford to experience operating system failures and out-of-date graphics or security software?
- If you are planning to migrate your ATMs to TCP / IP, have you considered the possible vulnerabilities in terms of the security integrity of your ATM reliability?

FEATURES

- Improved business continuity and profitability as Remote Software Manager (RSM) provides on-line ATM updates of the Operating System and Anti-Virus protection via the Everlink RSM server, ensuring your ATM is up-to-date and protected at all times.
- Remote automated software distribution capability that establishes a secure channel between the ATM and the Everlink processing infrastructure to distribute any type of software file to the ATM.

PREREQUISITES

- ATM must be utilizing a TCP/IP communications protocol
- ATM must be capable of having a software agent installed
- ATM must have been certified by Everlink for the RSM capability
